Tab B

The following items may be considered as a guide in determining recommendations for certain responsibilities and delegated authorities for the FE Division Chief in the field. They are neither all-inclusive nor directive in nature. All responsibilities and authorities finally approved will be within the framework of policies, programs and directives of the DCI.

1. Participation in the development by Washington Headquarters of programs, projects or other matters to be carried out in the FE area.

2. Submission to Washington Headquarters for approval of such regional, area and country plans, projects or programs which may be initiated in the FE area.

3. Recommendation to Washington Headquarters for such modification of plans, programs, and projects as may be considered necessary.

25X1A

5. Approval of sub-projects (i.e., within Headquarters-approved projects) and minor projects (i.e., up to \$75,000 within Headquarters-approved programs), provided that project outlines and PRQs are submitted promptly to Headquarters.

6. An adequate system for making periodic field reports on operations.

7. Provision for direct technical channels of communication between appropriate Washington Headquarters offices and technical staffs in the field for advice and exchange of information purposes.

8. Final action on promotions, within established grade authorizations, up to GS-12. There should also be authority to redelegate to major forward area commanders and station chiefs,

promotion authority to grades below the maximum authorized for field action; to GS-5 by station chiefs and GS-7 or GS-9 by forward area commanders.

9. Final action on employment of personnel from sources within the field area up to a specified grade, such as GS-7 or GS-9, subject to prescribed security clearances.

10. Final action on transfer of personnel within the command, subject to Washington Headquarters concurrence for specified categories of professional experts.

11. Procurement within the field area, within fairly broad general authorization, of materiel and facilities when either emergency, security or local conditions warrant. This should include procurement of cars; lease, construction and purchase of real estate; procurement, to include arrangements for manufacture, if necessary, of equipment or supplies when economical to do so or when items are not available from United States, etc.

12. Over-all control and deployment of assets within the field area.

13. Depletion of prescribed stock levels when considered essential, but not in excess of a specified proportion.
